

Instructions for putting your own pyramid together

1. Print each triangle separately. Laminate and cut the triangle (with no margin or small margin (about .25 inch maring)).
2. Arrange four triangles to be facing each other the way it is shown here. Focus carefully on the colors of the corners to match.
3. Make sure the spacing between each pyramid is about .25 - .30 inches approximately. The spacing helps you to fold the pyramid so that you can put it in your brief case.
4. Use 3/4 inch (.75 inch) mylar tape (3M make -- available in office supply stores) and put them together. Use tape on both sides for sturdiness.
5. Trim the excess tape using scissors.

You now have your own
Discontinuous Learning pyramid!
